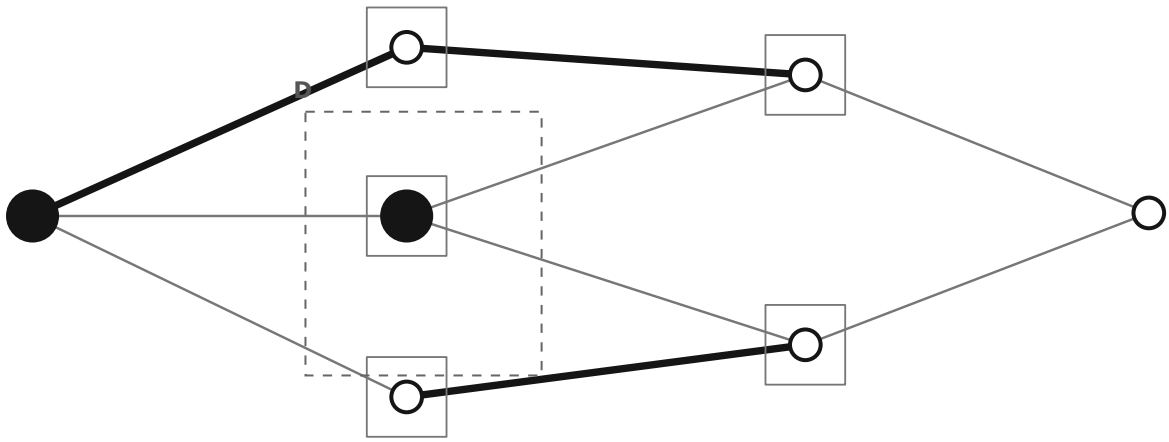
M016

Mock distributed key-generation network

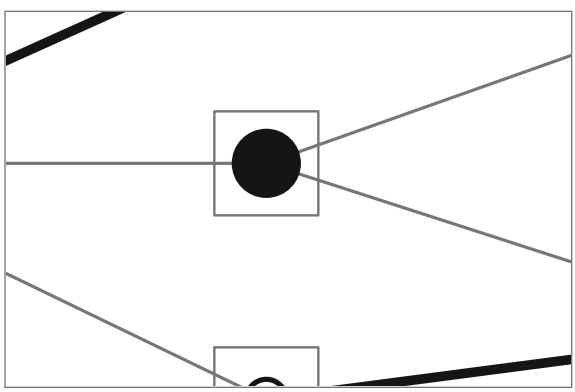


01 coordinator

02 worker pull queues

03 checker nodes

D / OPERATION DETAIL



Vector detail / 1.30× main-view scale

HOW THE OPERATION WORKS

A coordinator hands work units to generator nodes while optional checker nodes consume results. Pull-based scheduling balances unequal workers.

READ THE THREE STAGES

01 coordinator
02 worker pull queues
03 checker nodes

WHAT WAS ACTUALLY DONE

mock_keyspace_network.py runs bounded practice batches using processes or threads. Its counters and coverage checks demonstrate orchestration; the mock network is not evidence of a full 71-bit sweep.

ORIGINAL FINDING / IMPLEMENTED

Pull-based process/thread workers and checker queues exercise scheduling on bounded mock work; not a full puzzle solve.
