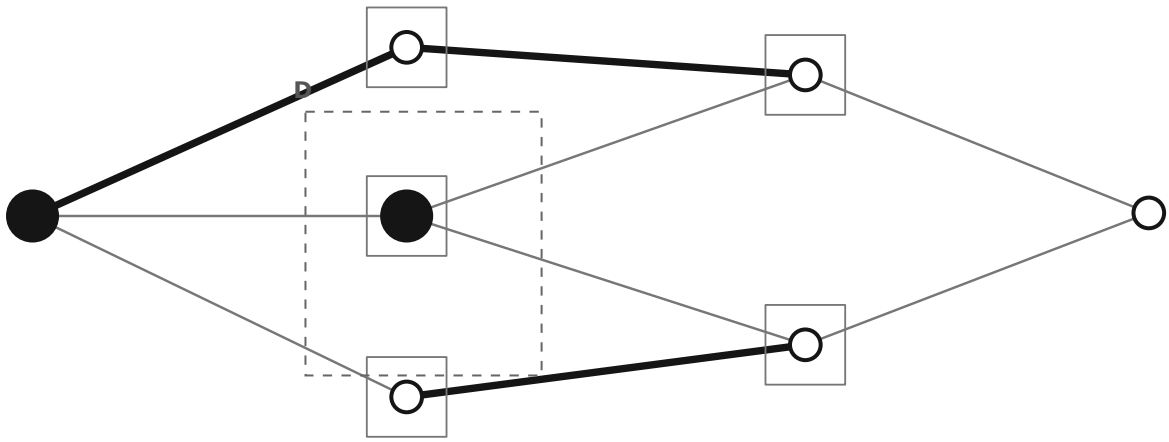
M035

RunPod/Vultr sharding and orchestration

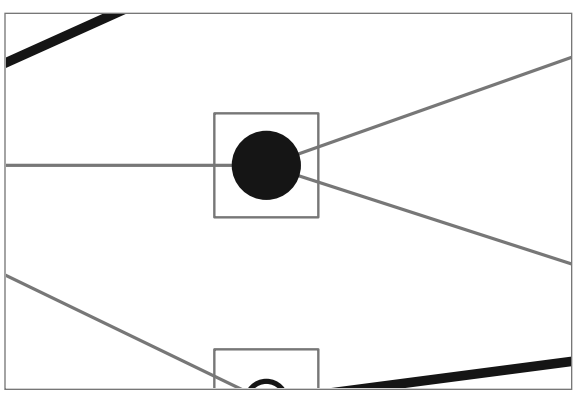


01 job manifest

02 remote shards

03 collected checkpoints

D / OPERATION DETAIL



Vector detail / 1.30× main-view scale

HOW THE OPERATION WORKS

Partition solver jobs across remote workers, transfer manifests, run executables and collect outputs/checkpoints.

READ THE THREE STAGES

01 job manifest
02 remote shards
03 collected checkpoints

WHAT WAS ACTUALLY DONE

Deployment scripts and playbooks implement build/start/status procedures. This review documents those artifacts without launching instances or treating a successful cloud allocation as a successful key search.

ORIGINAL FINDING / IMPLEMENTED

Deployment runbooks, work-unit manifests and recovery scripts coordinate bounded jobs; availability is distinct from a successful search.
