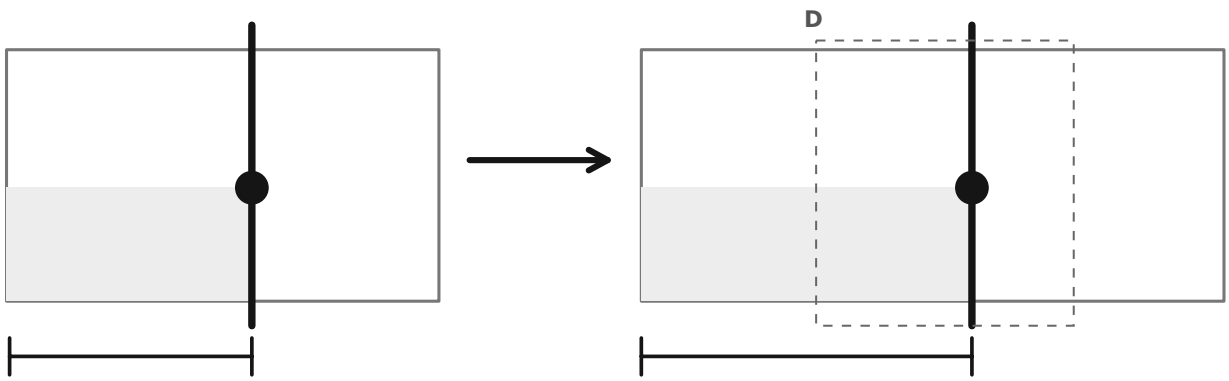
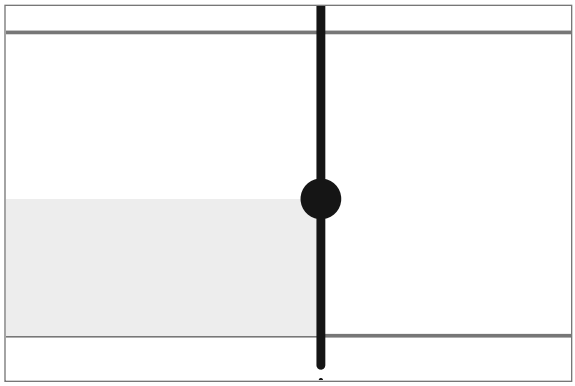
M075

Transferred within-bucket share



01	02	03
donor fraction	rescale bucket share	target offset

D / OPERATION DETAIL



Vector detail / 1.21× main-view scale

HOW THE OPERATION WORKS

Transfer a fraction of a donor bucket rather than its raw offset so buckets of different sizes can be compared.

READ THE THREE STAGES

01 donor fraction
02 rescale bucket share
03 target offset

WHAT WAS ACTUALLY DONE

The code rescales each selected share by the target bucket width and rounds to an integer candidate. Any rounding and donor choice are part of the tested hypothesis.

ORIGINAL FINDING / EXECUTED RECORD

Reuse disclosed normalized root-bucket shares at legal target roots; tests do not cover arbitrary offset functions.
