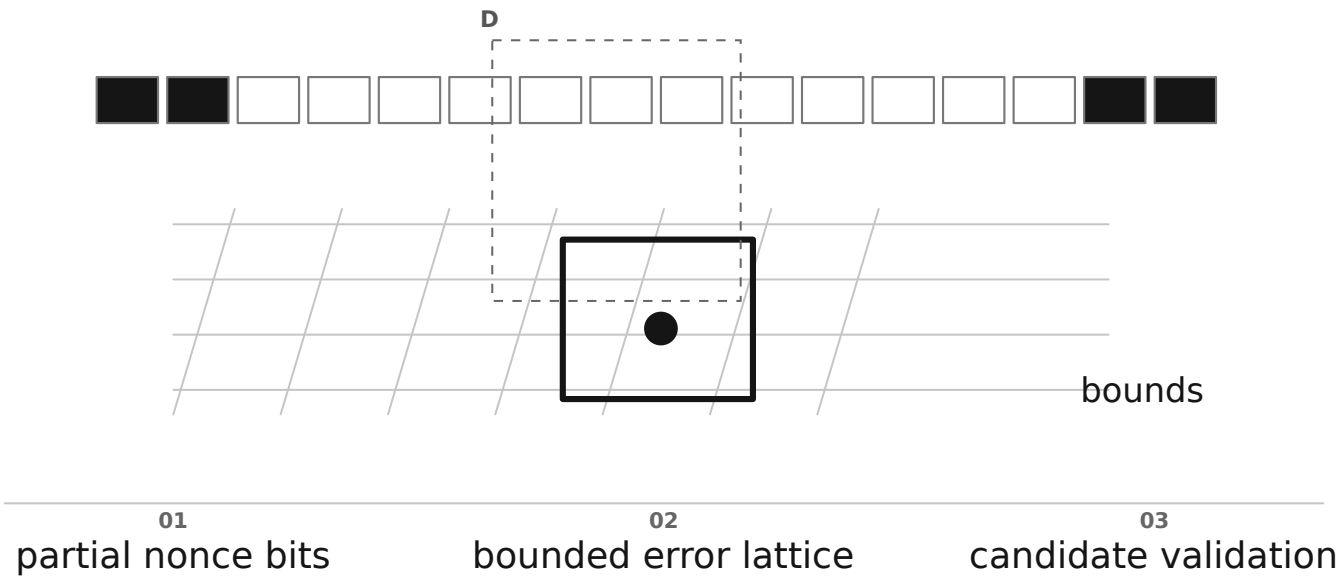
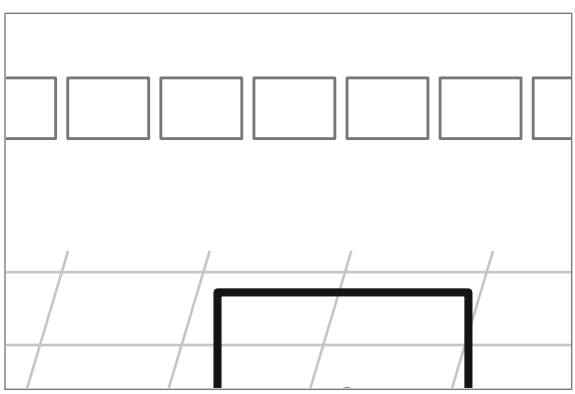
M137

Hidden-number/partial-MSB nonce leakage models



D / OPERATION DETAIL



Vector detail / 1.32× main-view scale

HOW THE OPERATION WORKS

Multiple signatures with known nonce bits create inequalities that can support Hidden Number Problem/lattice recovery or smaller interval searches.

READ THE THREE STAGES

01 partial nonce bits
02 bounded error lattice
03 candidate validation

WHAT WAS ACTUALLY DONE

The registry models synthetic MSB leaks and required bit budgets. The available target data do not include the corresponding independent bit leaks or adequate applicable signatures.

ORIGINAL FINDING / SYNTHETIC/APPLICABILITY

Synthetic bounds and applicability checks exist; the target signatures do not supply the required leakage measurements.
