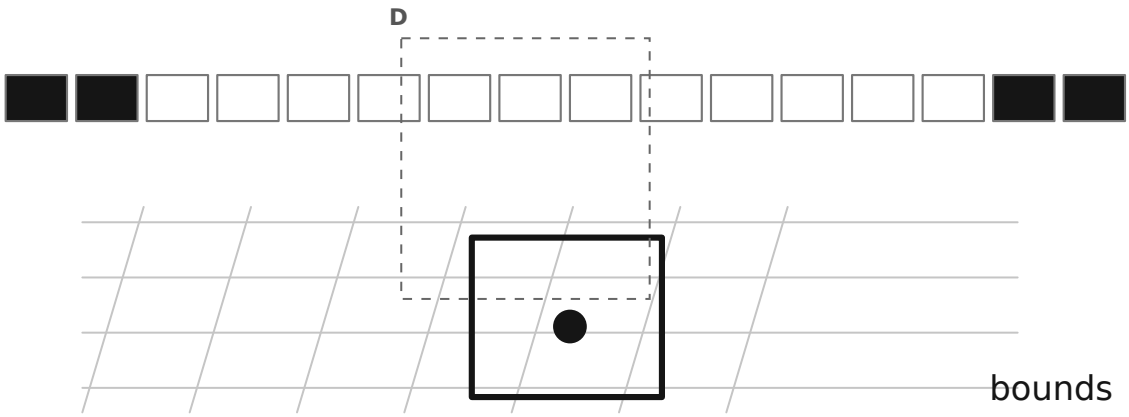
M138

Polynonce/half-half/side-channel possibilities

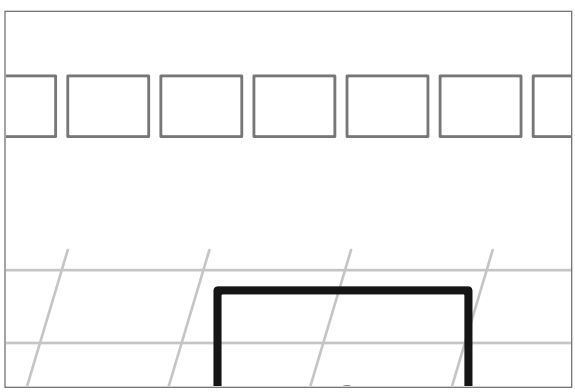


01 structured nonce model

02 additional leakage needed

03 recovery hypothesis

D / OPERATION DETAIL



Vector detail / 1.32× main-view scale

HOW THE OPERATION WORKS

Polynomial nonce recurrences, concatenated half-nonces or measured side-channel leakage provide special extra structure beyond ordinary ECDSA.

READ THE THREE STAGES

01 structured nonce model
02 additional leakage needed
03 recovery hypothesis

WHAT WAS ACTUALLY DONE

The literature mapping checks whether those prerequisites exist. This is an applicability review; it does not execute a successful lattice/side-channel attack on a single ordinary signature.

ORIGINAL FINDING / APPLICABILITY REVIEW

Reviewed as conditional attacks; missing signatures, special nonce structure or measurements block their use on the cited target.
