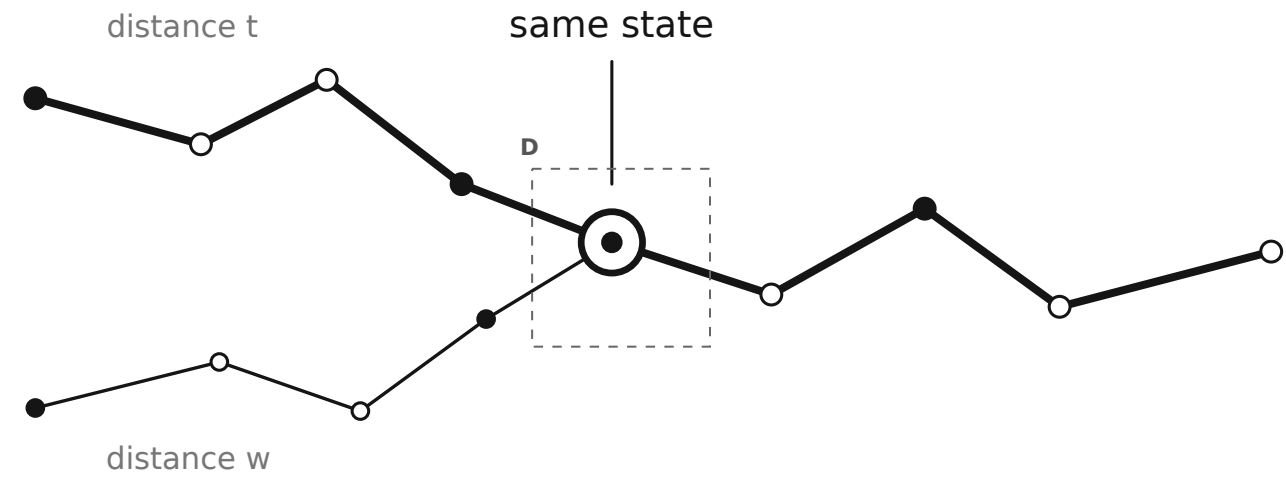
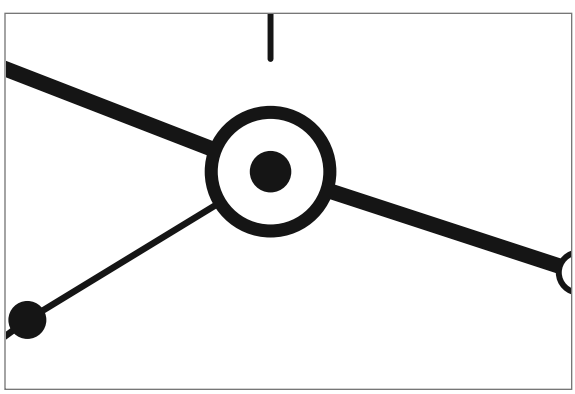
M146

DP metadata distances and signed collision variants



D / OPERATION DETAIL



Vector detail / 1.93× main-view scale

HOW THE OPERATION WORKS

Interpret candidate metadata slices as walk distances and test whether they satisfy the claimed tame/wild public-point equations.

READ THE THREE STAGES

01 parsed DP distances
02 signed walk equation
03 candidate scalar check

WHAT WAS ACTUALLY DONE

Archived scans vary bit widths, signs, starts and collision formulas. A distance-looking field is rejected unless its derived point or scalar matches the target.

ORIGINAL FINDING / EXECUTED RECORD

Archived metadata-width, start-point, sign and collision-formula tests found no verified puzzle scalar.
