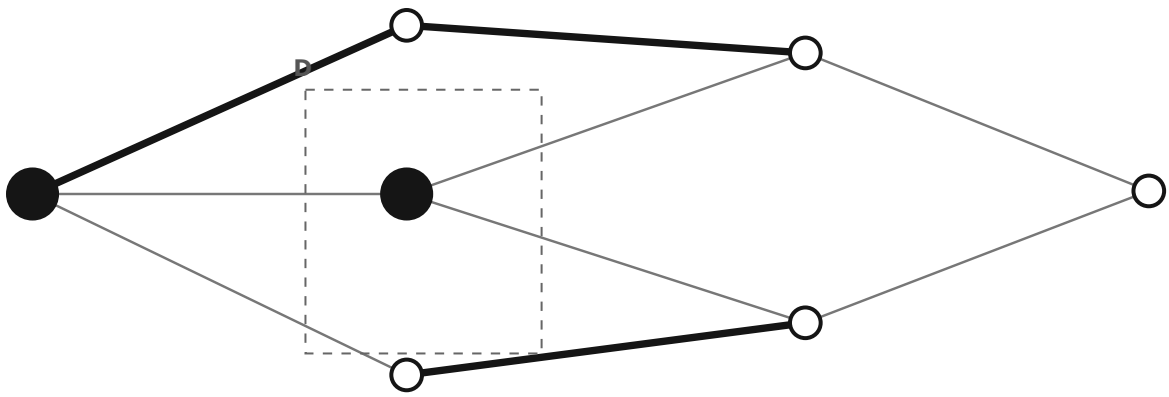
M156

Hub-address and recoverability scans

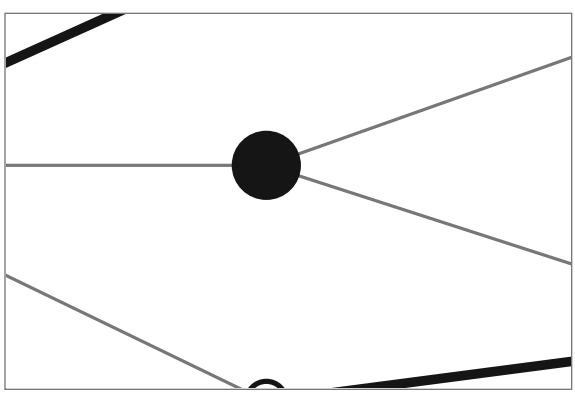


01 hub addresses

02 spends and outputs

03 recoverability evidence

D / OPERATION DETAIL



Vector detail / 1.30× main-view scale

HOW THE OPERATION WORKS

Query selected addresses and outputs to find spends, public keys, old funds or other data relevant to recoverability hypotheses.

READ THE THREE STAGES

01 hub addresses
02 spends and outputs
03 recoverability evidence

WHAT WAS ACTUALLY DONE

Saved scans summarize activity and candidate opportunities. They do not freshly establish present balances, authority over wallets or a successful cryptographic recovery.

ORIGINAL FINDING / EXECUTED RECORD

Address/UTXO activity scans identify data leads; no present ownership or balance conclusions are newly verified here.
