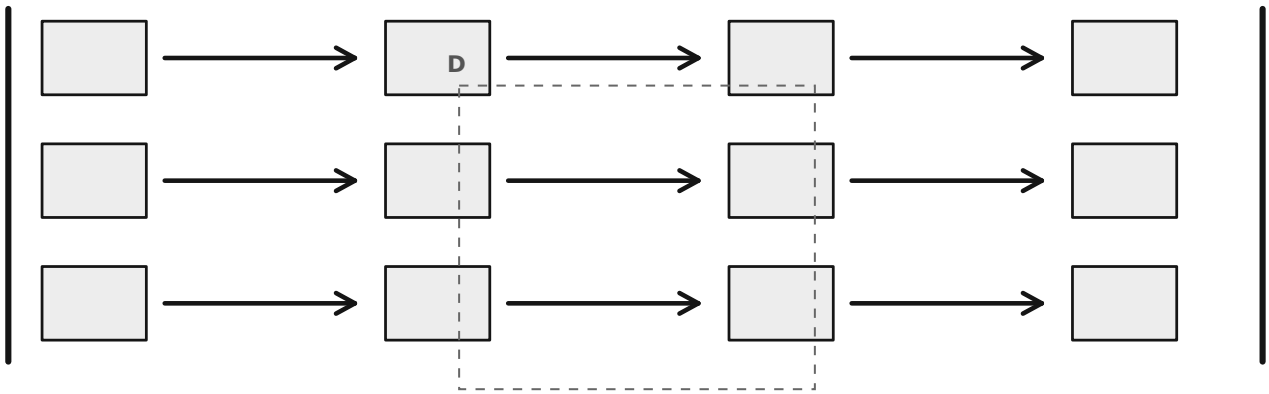
M179

Weak-entropy multi-family CUDA sweep

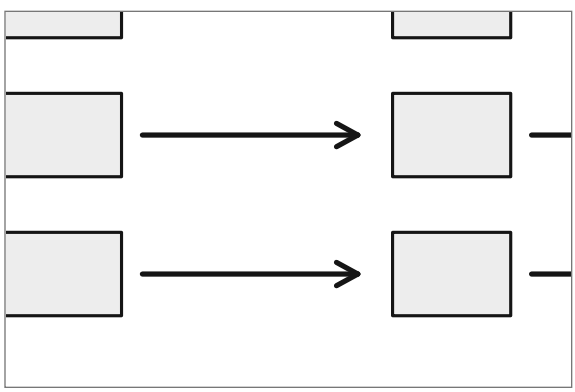


01 seed ranges

02 GPU PRNG / curve lanes

03 address-index checks

D / OPERATION DETAIL



Vector detail / 1.13× main-view scale

HOW THE OPERATION WORKS

Parallel GPU threads map seeds through PRNG, curve multiplication and hash comparison against a supported address index.

READ THE THREE STAGES

01 seed ranges
02 GPU PRNG / curve lanes
03 address-index checks

WHAT WAS ACTUALLY DONE

Archived multi-family runs report seed counts and planted-index detection checks. Their coverage is bounded by the selected generator families, seed intervals and supported address encodings.

ORIGINAL FINDING / RECORDED GPU SWEEP

Saved report claims 27.5 billion seeds and zero funded-index hits, with planted-index detection tests. Historical record, not rerun here.
