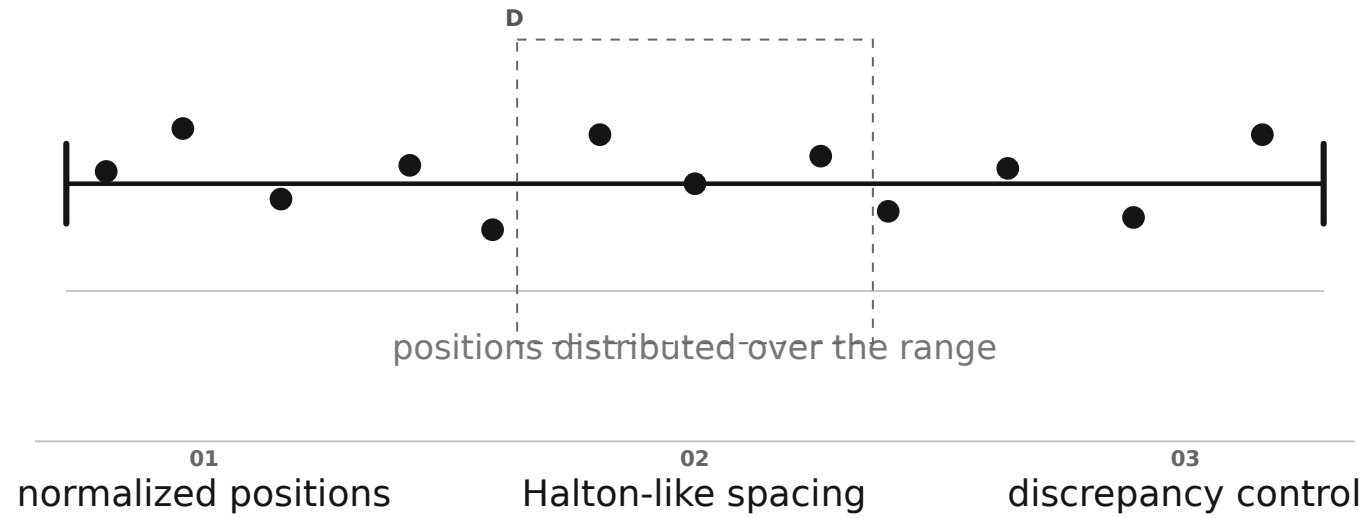
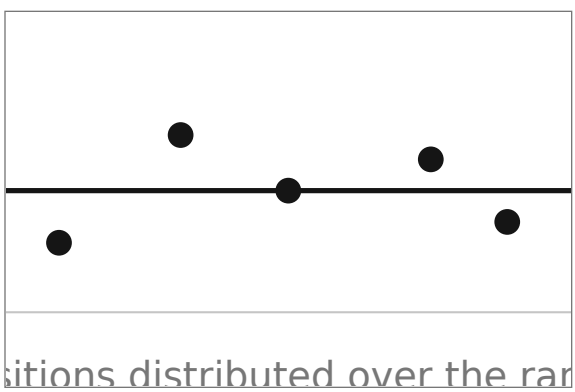
M186

Low-discrepancy / Halton-like tier placement



D / OPERATION DETAIL



Vector detail / 1.13× main-view scale

HOW THE OPERATION WORKS

Normalize key positions to [0,1) and measure gaps or star discrepancy against structured low-discrepancy schedules.

READ THE THREE STAGES

01 normalized positions
02 Halton-like spacing
03 discrepancy control

WHAT WAS ACTUALLY DONE

The creative report compares its discrepancy statistic with random controls. Evenly spread finite observations do not establish a deterministic next-key schedule.

ORIGINAL FINDING / EXECUTED RECORD

Compare normalized-position discrepancy; no significant deterministic schedule established.
