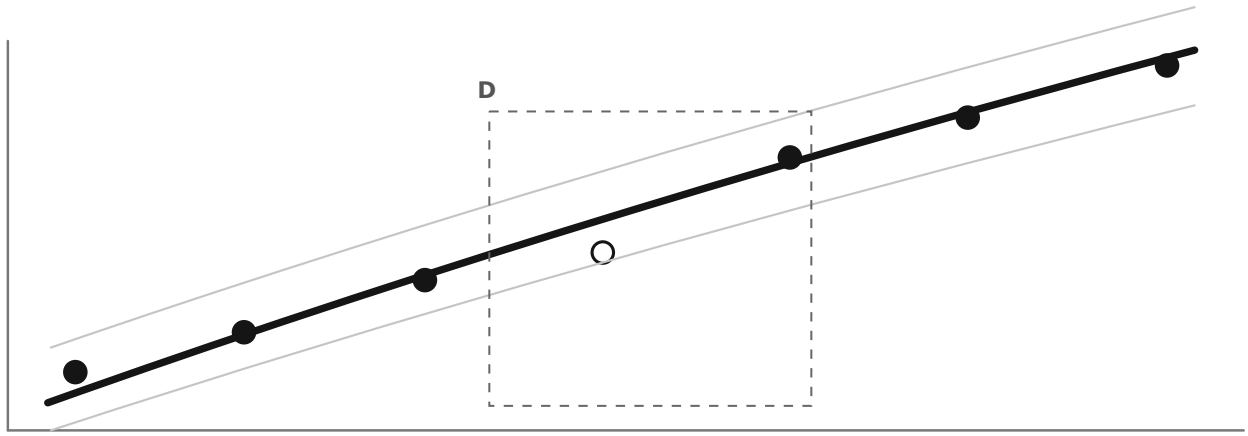
M189

Polynomial in puzzle number

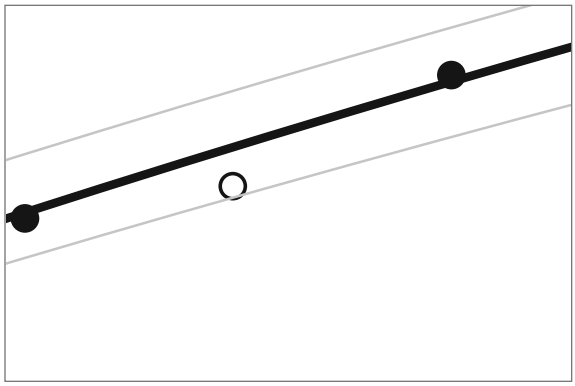


01
puzzle indices

02
polynomial fit

03
later scalar estimate

D / OPERATION DETAIL



Vector detail / 1.17× main-view scale

HOW THE OPERATION WORKS

Fit a low-degree function of puzzle number and forecast later key positions or values.

READ THE THREE STAGES

01 puzzle indices
02 polynomial fit
03 later scalar estimate

WHAT WAS ACTUALLY DONE

The creative theory uses leave-one-out error versus controls; separate exact continuation tests verify concrete candidates. A polynomial fitting all known points has no automatic predictive authority.

ORIGINAL FINDING / EXECUTED RECORD

Leave-one-out prediction compared with random keys; fitting known data does not determine the next scalar.
