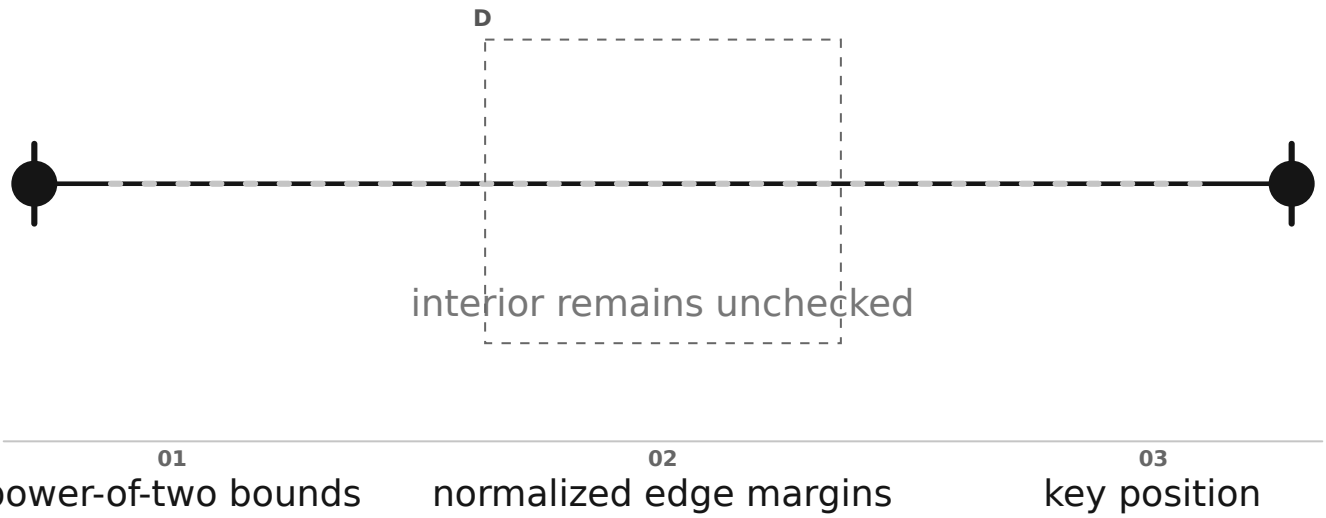
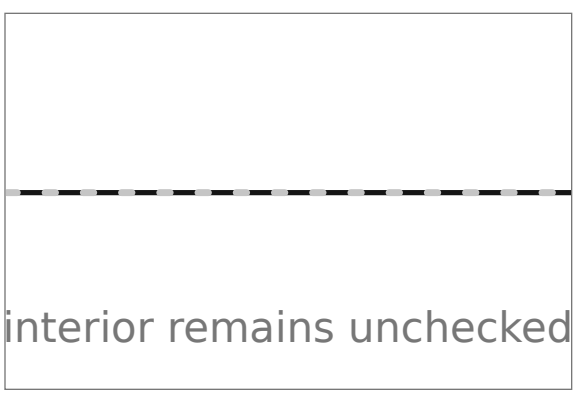
M191

Mersenne-adjacent margin hypothesis



D / OPERATION DETAIL



Vector detail / 1.13× main-view scale

HOW THE OPERATION WORKS

Measure whether keys lie unusually close to powers of two or all-ones Mersenne-style boundaries.

READ THE THREE STAGES

01 power-of-two bounds
02 normalized edge margins
03 key position

WHAT WAS ACTUALLY DONE

The creative test compares normalized margins with uniform controls. Small margins would identify a candidate region only under a validated generator prior.

ORIGINAL FINDING / EXECUTED RECORD

Distances to power-of-two boundaries compared with random ranges.
