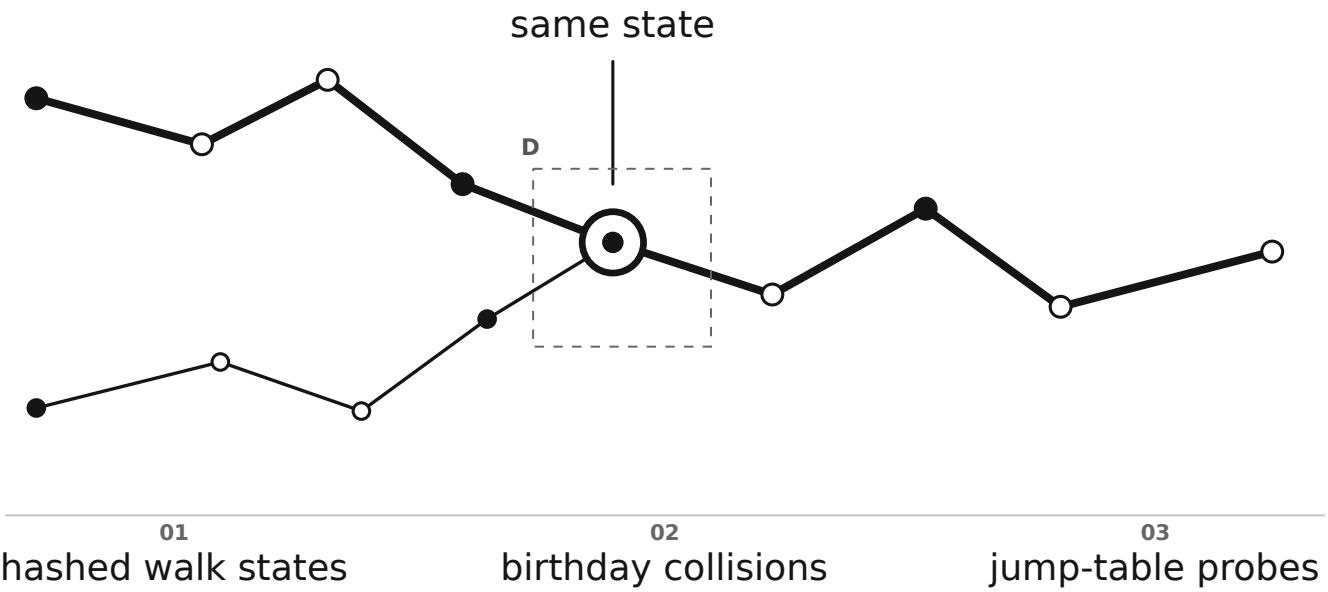
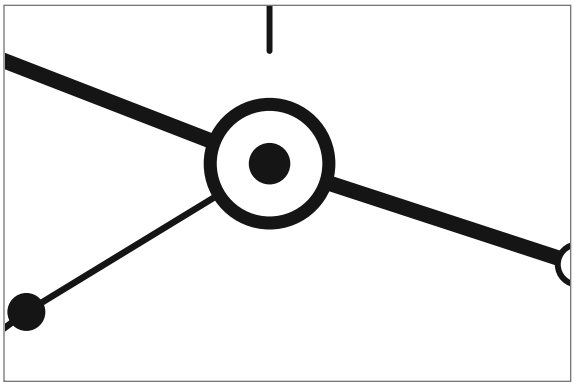
M198

DP hashing/birthday/URAND jump probes



D / OPERATION DETAIL



Vector detail / 1.93× main-view scale

HOW THE OPERATION WORKS

Measure hash-table collisions, birthday behavior and candidate jump tables to improve practical walk mechanics.

READ THE THREE STAGES

01 hashed walk states
02 birthday collisions
03 jump-table probes

WHAT WAS ACTUALLY DONE

Bitsavers-inspired probes model open addressing and first-collision counts, then compare URAND-derived jumps. These are solver engineering experiments, not secret-generator observations.

ORIGINAL FINDING / IMPLEMENTED

Bitsavers-inspired hash-table, collision and jump-distribution experiments assess solver mechanics.
